

## CYBER SECURITY

YOUR WATCH TOWER

Our Cybersecurity services utilize human expertise along with AI-enabled machine learning and data analytics to enhance threat detection and response. By deep analysing to your IT and IoT landscape, we enable you to engage large datasets in real-time, which will identify anomalies and vulnerabilities and automating routine tasks to reduce human error. This adaptive approach enables rapid responses to emerging threats, improving overall security posture and compliance.

### What we Do

**VAPT & Risk Assessments :** We identify and evaluate vulnerabilities in your entire system and networks. Our VAPT (Vulnerability Assessment and Penetration Testing) will simulate the attacks and will test the effectiveness of security measures what you have in your organization

**SOC Services:** Immediate action and support to mitigate the impact of security breaches. Hunting about potential threats to preemptively defend against attacks

**Managed Security Service:** Continuous monitoring and management of all your security devices and systems

**Identity and Access Management:** Controlling user access to systems and data to prevent unauthorized access

**Security Awareness Training:** Educating employees about cybersecurity best practices and potential threats to protect organizationl assets

**Certification and Compliance Management:** We help you to adhere to the industry standards and regulations by implementing necessary controls. Our ongoing support will enhance operational efficiency and foster trust in stakeholders

**IoT Security:** Ensure robust security, monitor unusual activity and maintain the integrity of connected devices and traceability data

**Endpoint Security:** Secure all user devices againts threats using MDM and EDR solutions

**Network Security:** Implementing measures to protect the integrity of network and data

**Cyber Insurance:** Financially protect and mitigate impacts due to cyber incidents and attacks that includes ransomware
